1. What is MakeShift?

MakeShift is a **space booking management platform** designed for co-working spaces, event venues, and shared offices. It has two parts that work together:

- A **public website** where customers browse spaces, check availability, and send booking inquiries.
 - An **admin panel** where your team manages everything — from setting up rooms and schedules to processing payments and confirming reservations.
-

2. The Two Sides of MakeShift

Side	Who uses it	What they do
------	-------------	--------------

Public Website	Customers / Guests	Browse spaces, check availability, submit inquiries, contact the business
Admin Panel	Staff / Administrators	Manage rooms, handle bookings, record payments, configure the site

Customers never need an account. Admins have their own secure login.

3. Logging In (Admin Access)

The admin login page is intentionally kept unlisted to prevent exposure to the general public.

- **URL:** `yoursite.com/auth-access`
- Enter your admin email and password to log in.

Security note: This URL is not linked anywhere on the public website. Only share it with authorized staff.

4. Dashboard

The dashboard is the first thing you see after logging in. It gives you a quick overview of what's happening today.

Widgets

- **Today's Bookings** — Shows all bookings (Pending and Confirmed) scheduled for today, so front desk staff know who to expect.
- **Recent Bookings** — The 5 most recently created bookings at a glance.
- **Last Active Users** — The 5 admin accounts that logged in most recently.

Booking Verification (Check-In Tool)

When a customer arrives at your space, you can verify their booking directly from the dashboard:

1. Ask the customer for their **voucher code** or have them show the **QR code** from their confirmation email.
2. On the dashboard, enter the code manually or scan the QR code.
3. MakeShift will instantly show you their full booking details (name, room, date, time) so you can confirm they have a valid, confirmed reservation.

This is the primary tool for **front desk staff** to use on the day of the booking.

5. Spaces Module

This is where you set up and manage the physical spaces available for booking.

Rooms

Rooms are the core of MakeShift. Each room represents a bookable space (a meeting room, event hall, hot desk area, etc.).

When creating or editing a room, you can configure:

Field	What it means
Name	The display name shown to customers
Description	A detailed description of the space
Price per Hour	Hourly rate charged for this room
Size (sqm)	Floor area of the space
Qty (Quantity)	Total number of units available. For a room, this is usually 1. For a hot desk area, this would be the total number of seats.
Cap (Capacity per unit)	How many people fit per unit. For private rooms, this is the room capacity. For shared desks, each desk = 1 seat, so capacity is typically 1.
Active	Toggle this ON to make the room appear on the public website. Toggle OFF to hide it without deleting it.
Private	When ON, this is treated as a non-shared space (a full room booking). When OFF, individual seats/desks can be booked by different customers at the same time.
Schedule	Assign an availability schedule to control when this room can be booked.
Amenities	Select which amenities are available in this room (e.g., WiFi, Projector, Whiteboard).
Layouts	Select which layout configurations customers can choose from (e.g., Classroom, Boardroom, U-Shape).
Images / Gallery	Upload photos of the room to display on the public website.

Tip: A room will not appear as bookable unless it has an active schedule assigned to it.

Viewing a room's discounts: On the room's detail page, a **Discounts** row (below Layouts) lists any ongoing or upcoming promos assigned to that room, with the promo name and its value (e.g., "10% OFF"). A discount is tagged **Ongoing** (green) when today falls inside its **Booking Period** — meaning a customer inquiring today qualifies, even if the stay date they pick is later in the Reservation Dates window. It's tagged **Upcoming** (amber) when the Booking Period hasn't opened yet. Click a tag to open that discount for editing in a new tab. Expired discounts are not shown here; manage them from **Spaces → Discounts** instead.

Amenities

Amenities are the features or equipment available in your spaces (e.g., "WiFi," "Air Conditioning," "Projector," "Whiteboard").

- Go to **Spaces → Amenities** to add, edit, or remove amenities.
- Each amenity has a **name** and an **icon**.
- Once created, amenities can be selected when setting up or editing a room.
- Customers see the amenity list on the space detail page.

Layouts

Layouts define the seating or setup arrangements available in a room (e.g., "Classroom," "Boardroom," "U-Shape," "Theater").

- Go to **Spaces → Layouts** to manage layout options.
- Once created, layouts can be assigned to rooms.
- During booking, customers can select their preferred layout from the options assigned to the room.

Discounts

Discounts let you run promos on selected rooms without the customer needing a promo code. If a room has an active discount and the booking falls inside the dates you set, the discount is applied automatically — on the website, in the customer's emails, and on the amount they need to pay.

Go to **Spaces → Discounts** to add or manage them.

Field	What it means
Name	The promo name customers see (e.g., "Summer Promo")
Description	Optional internal note; not shown to customers
Discount Type	Fixed Amount (peso amount off) or Percentage (% off)
Amount off / Percentage	How much comes off. This is applied per hour , off the room's hourly rate
Priority	If several discounts cover the same room, the one with the lowest number wins (1 = top priority)
Status	Active discounts apply; Inactive ones are ignored
Rooms	Which rooms the discount applies to. At least one is required
Reservation dates (From / To)	Which booking dates the discount covers. Required
Booking period (From / To)	When the inquiry must be submitted to qualify. Required

Important things to know:

- **The discount is per hour.** A ₱50 fixed discount on a ₱500/hour room booked for 3 hours across 2 spaces takes off ₱300 in total ($₱50 \times 3 \text{ hours} \times 2 \text{ spaces}$), bringing ₱3,000 down to ₱2,700.
- **A fixed discount never goes below zero.** If the amount off is larger than the room rate, the rate simply becomes ₱0.
- **All four dates are required.** Every discount must have a start and end for both ranges — there is no open-ended promo. If you want one to run indefinitely, set its end date far in the future.
- **The dates are inclusive.** A promo running 1–31 August applies on both 1 August and 31 August.
- **Promos are advertised before they start.** On the home page, the spaces list, and a room page before a date is picked, a promo that hasn't begun yet shows as "10% OFF from Aug 1". Prices are **not** crossed out yet — the discount only takes effect once the customer picks a date inside the reservation window. A promo is only advertised this way if its booking period is already open, so anything shown as upcoming can actually be claimed by inquiring today.
- **The two date ranges do different jobs.** "Reservation dates" is about *when the customer is booking for*. "Booking period" is about *when they submit the inquiry* — use it for things like "book this week only."
- **Only one discount applies per room at a time.** You are allowed to create overlapping discounts; the system picks the one with the **lowest priority number** — priority 1 beats priority 10. Overlapping

rows show a warning icon in the list so you can spot them.

- **Already submitted bookings are locked in.** When a booking is created, the discount is saved onto that booking. Editing, deactivating, or deleting the discount afterwards will **not** change bookings that were already submitted.
- **Editing a booking does *not* automatically re-check the discount.** Changing a note, a phone number, or any other field leaves the price exactly as it was — the total won't silently shift because of an unrelated edit.
- **Changing the booking's room is the one exception.** Because a discount and a voucher are worked out from the room's hourly rate, they cannot carry over to a different room — they are **cleared automatically** when you change the room, and a message on screen tells you so. Re-apply them with the refresh icon and the voucher picker if they still apply to the new room.
- **If you change a booking's room, date, time, or quantity, recalculate the discount yourself.** On the booking detail page (Inquiry and Pending bookings only), a small refresh icon sits beside the discount amount — click it to re-check the current room and dates against active discounts. A dialog shows the **Before** and **After** side by side (discount and total price) so you can review the change before confirming it; nothing is applied until you click **Apply Change**. Until you do, the total keeps using the discount that was worked out before your edit — even if it no longer makes sense for the new room or date. Confirmed bookings never show this icon; their price is permanently locked in.
- **Deleting a discount is safe.** Past bookings keep their discount name and amount on record.

Vouchers

Vouchers are offers the **customer chooses** — typically a reward for a longer stay or a bigger booking ("Book 6+ hours, get 10% off"). Unlike a Discount, a voucher is never applied automatically: the customer sees it on the inquiry page and taps it to claim it.

Go to **Spaces → Vouchers** to add or manage them.

Most fields work exactly like a Discount (name, type, amount/percentage, rooms, both date ranges, status). The differences:

Field	What it means
Minimum Hours	The customer must book at least this many hours before the voucher unlocks. Leave blank for no hour requirement
Minimum Spend	The booking total (before any automatic discount) must reach this amount. Leave blank for no spend requirement
Priority	Ordering only — vouchers never compete with each other. Lower numbers appear first in the customer's list

Important things to know:

- **Set at least one criterion.** A voucher needs a minimum hours, a minimum spend, or both. When both are set, the booking must meet **both**.
- **Vouchers stack on top of discounts.** If a room has an active promo and the customer claims a voucher, they get both. Both come off the **original** room rate, so they never compound: on a ₱1,000/hour room, a 20% promo plus a ₱100 voucher gives $₱1,000 - ₱200 - ₱100 = ₱700$ per hour.
- **Only one voucher per booking.** Claiming a second one replaces the first.
- **Locked vouchers are still shown.** A voucher the customer doesn't qualify for yet appears greyed out with what's missing ("Book 6+ hours to unlock — 2 more hours"), so they can see what's within

reach.

- **Vouchers appear twice, and the choice carries over.** They show first in the **Inquire Now** pop-up on the room page, where the cards unlock and re-price live as the customer changes their time range; the claimed voucher then carries through to the full inquiry form, where it can still be changed or removed. If the customer shortens their booking so a claimed voucher no longer qualifies, it is dropped automatically.
- **Nothing is trusted from the browser.** Eligibility is re-checked when the inquiry is submitted. A voucher whose criteria aren't met is simply not applied — the booking still goes through at the normal price.
- **Staff can change it.** On an Inquiry or Pending booking, an **Apply voucher** button beside the price lets staff claim, swap, or remove the voucher. Confirmed bookings are locked, like all pricing.
- **You are warned if an edit invalidates the voucher.** Editing a booking never re-prices it on its own. So if you shorten a booking below the voucher's minimum hours, move it outside the voucher's dates, or the voucher is later deactivated or deleted, an amber warning appears on the booking with the exact reason and a **Remove** button. (Changing the room is handled differently — the voucher is cleared outright, since its amount was based on the old room's rate.) Until you act, the original amount keeps being deducted — the warning is there so that is a decision, not an accident.
- **Recalculating the discount leaves the voucher alone.** The refresh icon only re-checks the automatic promo; the claimed voucher stays on the booking and is included in the Before/After figures.

6. Availability Module

This module controls **when** your rooms are open for booking.

Schedules

A schedule is a **weekly template** that defines your regular operating hours. You create one schedule and assign it to one or more rooms.

Each schedule includes:

Setting	What it means
Name	A label for this schedule (e.g., "Standard Weekday Hours," "Weekend Hours")
Daily Hours	For each day of the week (Mon–Sun), set the opening and closing time. Leave a day blank to mark it as closed.
Max Days	How many days in advance a customer is allowed to book. Example: setting 30 means customers can book up to 30 days from today.
Max Date	A hard cutoff date. No bookings will be accepted beyond this date, regardless of Max Days. Useful for seasonal closures or planning periods.

How it works: When a customer selects a date on the public website, MakeShift checks the room's assigned schedule to determine if it's open and what time slots are available.

Schedule Overrides

Overrides let you **change availability for a specific date**, without modifying your regular schedule. Think of them as exceptions to your normal hours.

Common use cases:

- **Closing for a holiday** — Override a normally-open date to mark rooms as closed.
- **Scheduled maintenance** — Block off a room or multiple rooms for a specific day.
- **Special opening** — Open on a day that your regular schedule marks as closed (e.g., a special Sunday event).
- **Sudden changes** — Quickly close rooms for unexpected situations.

How overrides work:

- An override targets a **specific date**.
- You can apply one override to **multiple rooms at once**.
- You choose whether the override marks the rooms as **Open** (with custom hours) or **Closed**.
- **Overrides always take priority over the regular schedule**. If a room has an override on a given date, the override wins — no exceptions.

Example: Your schedule says Monday–Friday, 8am–6pm. You create a "Closed" override for December 25. Even though that's a Tuesday, all affected rooms will show as unavailable on that day.

7. Transactions Module

This module is where all booking and payment activity is managed.

Bookings

Bookings can be created in two ways:

1. A **customer submits an inquiry** through the public website.
2. An **admin manually creates a booking** from the admin panel.

The bookings list supports two views — toggle between them using the "**View in Calendar / Table format**" button:

- **Table view** — paginated list with full detail columns.
- **Calendar view** — month calendar showing all bookings colour-coded by status. Click any event to open the booking.

Both views share the same **filter panel** (the sliders icon). You can filter by status, date range, room, and layout. Filters are cleared automatically when you switch between views.

When viewing or creating a booking, key fields include:

Field	What it means
Room	Which space is being booked
Date	The booking date
Time Start / End	The time range for the booking
Layout	The selected room setup (if applicable)
Notes	Any special requests from the customer. Also holds the reschedule history — each reschedule of a Confirmed booking appends a dated log line here (this appears in customer emails too)

Referred By	Free-text field — who referred the customer (e.g. a person or company's name), if any
Source	How the customer heard about the business, chosen from the Sources list (see below)
Status	Current state of the booking (see flow below)
Expires At	Deadline for the customer to complete payment before the booking is auto-cancelled
Voucher Code	Auto-generated when a booking is Confirmed; used for check-in

Adjusting the total

Sometimes the price needs to change for a reason the system can't calculate — an extra-cleaning charge, a goodwill discount, a negotiated rate. On an **Inquiry** or **Pending** booking, click **Adjust Total** (top right, beside **Edit**).

- Choose **Add charge** or **Deduct**, enter the amount, and give a **reason**. The dialog shows the current total and what it will become.
- **The reason is shown to the customer** in their emails (e.g. "Adjustment (Extra cleaning): + PHP 500.00"), so write it for them to read.
- A booking has **one adjustment**. Saving again replaces it; use **Remove adjustment** to clear it. Every change is recorded in the Audit Log.
- The adjustment is applied **after** any discount and voucher: $Subtotal - Discount - Voucher \pm Adjustment = Total$.
- **A deduction can't take the total below zero** — you can deduct at most the current total.
- **It stays if you change the room**. The discount and voucher are cleared on a room change (they're worked out from the room's rate), but the adjustment is a fixed amount you chose, so it is kept.
- The payment balance updates straight away, so the customer is asked for — and can be confirmed against — the adjusted total.
- **Confirmed bookings are locked**, so the button doesn't appear on them.

Booking Status Flow

Every booking moves through these statuses in order:

INQUIRY → PENDING → CONFIRMED
 ↘
 CANCELED

1. Inquiry

- The booking has been received but **nothing is reserved yet**.
- The customer receives an automated email acknowledging their inquiry.
- Other customers can still book the same slot at this stage.
- The admin reviews the inquiry and decides whether to proceed.

2. Pending

- The admin has reviewed and **tentatively reserved the slot**.
- The time slot is now blocked — other customers cannot book it.
- Choosing **Status → Pending** on an Inquiry opens a small dialog with a **Payment Deadline (Expires At)** field and two choices:

- **Set as Pending** — reserves the slot only. The deadline is optional here; you can send the payment email later with the **Notify** button.
- **Set as Pending & Notify** — reserves the slot *and* immediately sends the customer the **payment request email** (payment instructions, bank details, and the deadline). The deadline is optional — if left blank the email shows "N/A" for it.
- If the customer does not pay by the **Expires At** deadline, the booking is automatically moved to Canceled.
- Payments can now be recorded against this booking.
- The booking can still be canceled by the admin if needed.

3. Confirmed

- **Payment has been received** and the admin has marked the booking as confirmed.
- A **voucher code and QR code** are automatically generated and emailed to the customer.
- The booking is now **locked** — it cannot be edited or canceled. The only change allowed is a **reschedule** (see below).
- The customer presents the QR code at arrival for check-in.

Rescheduling a confirmed booking

If a paying customer needs a different date or time, open the booking and click **Reschedule** (only shown on Confirmed bookings).

- Pick the **new date**, then a **new start time** from the list. The list only shows start times where the booking's full original duration is free — the end time is filled in automatically and cannot be changed, so the number of hours (and the price) never changes.
- The **room cannot change**. Availability is checked for the same room, taking into account the schedule, any overrides, and other Pending/Confirmed bookings.
- The dialog shows the **locked rate** the customer already paid next to the **rate the new date would normally carry** (for example, if a discount applies on the new date but not the original one, or the other way around). This is for your awareness only — the customer's total stays exactly as paid.
- Optionally type a **note** (e.g. the reason). MakeShift appends a line to the booking's Notes with the date, your name, the old and new schedule, and your note — so the Notes act as a history of every reschedule.
- A **Booking Rescheduled** email goes to the customer (and to the BCC addresses, if set) with the previous and new schedule. The voucher code and QR code stay the same and remain valid.
- A booking can be rescheduled as many times as needed.

4. Canceled

- The booking has been canceled, either manually by the admin or automatically due to payment expiry.
- A cancellation email is sent to the customer with a reason.
- A canceled booking can be revived back to Inquiry status if needed.

Payment threshold: The system checks that the total recorded payments equal or exceed the booking's total price before allowing you to move it to Confirmed.

Payments

The Payments section is a record of all payment transactions linked to bookings.

- An admin can **record a payment** from either the Payments page or directly from a Booking's detail page.

- A single booking can have **multiple partial payments** (e.g., a deposit followed by a balance payment).
- Each payment record includes:
 - Which booking it's for
 - Payment provider (e.g., GCash, Bank Transfer, Cash)
 - Reference number (e.g., GCash transaction ID or bank reference)
 - PR/PO number (for internal tracking)
 - Amount billed and amount paid
 - Date paid
 - File attachment (e.g., screenshot of transfer proof)
 - Status (Pending, Paid, Failed, Expired, Canceled, Refunded)
 - Notes

The system automatically totals all **Paid** payments for a booking to check if the full amount has been settled.

Marking a payment as paid (shortcut)

When the money arrives, you don't need to open the payment and edit it. A green check icon appears on the Payments list (and a **Set as Paid** button on the payment's own page) for any **Pending** payment belonging to a **Pending** booking.

- Clicking it opens a confirmation showing exactly how much will be recorded as received — the **full billed amount**.
- **Paid At** is pre-filled with the current date and time. You can change it, or clear it to use the current time.
- Nothing is saved until you click **Mark as Paid**.
- This also records the amount received, so the booking's **total paid** updates immediately and it can be moved to Confirmed once the balance is covered.
- **Recording a partial payment?** Use **Edit** instead — the shortcut always records the full billed amount. If the payment already has a smaller amount recorded, the confirmation warns you before it is replaced.

If the booking has a discount, the amount owed is the **discounted** total — not the original price. When you pick a booking on the payment form, MakeShift shows its subtotal, discount, total, amount already paid, and the **remaining balance**, and pre-fills the Amount with that balance.

Payment Providers

Payment Providers are the payment methods your business accepts (e.g., "GCash," "BDO Bank Transfer," "Cash").

- Go to **Transactions → Payment Providers** to add or manage them.
- Each provider can be set as **Active** (available for use) or **Default** (pre-selected when recording a payment).
- All payment methods in MakeShift are **manual** — staff record them after the customer transfers money offline. There is no automated online payment gateway.

Sources

Sources are the list of options shown to customers when asked "**How did you hear about us?**" on the public inquiry form (e.g., "Google Search," "Social Media," "Referral," "Walk-in").

- Go to **Transactions → Sources** to add, edit, or remove options.

- Each source only needs a **name** (an optional description can also be added).
- Once created, a source appears as a dropdown option on the public inquiry form and in the admin booking create/edit screens.
- Deleting a source does not delete past bookings — bookings that used a since-deleted source will simply show no source.

New Inquiry Notifications

While you have MakeShift open, you're alerted whenever a customer submits a new inquiry — the same way sites like Facebook tell you about new messages.

- **Red dot on the browser tab.** A red dot appears on MakeShift's tab icon, and the tab title shows how many are waiting, e.g. **(3) Dashboard - MakeShift**. You can spot it from any other tab.
- **Pop-up in MakeShift.** If you're looking at MakeShift, a message appears in the top-right corner — "New inquiry from Maria Santos" — with a **View** button that opens it. Several at once are grouped as "3 new inquiries".
- **Desktop notification.** If you're somewhere else — another tab, another app, or the browser is minimised — your computer also shows a notification. Click it to jump straight to the inquiry. The pop-up in MakeShift waits for you too, so you'll still see who it was from when you come back, even if your computer didn't show the notification.

Turning on desktop notifications: the first time, MakeShift shows a message asking "*Get notified of new inquiries?*" — click **Enable**, then **Allow** when your browser asks. If you'd rather not, click **Not now** (or X); it won't ask again on that browser.

The bell (top right of every page) is where you check and fix desktop notifications at any time. Its look tells you the status:

Bell	Meaning
Plain bell	Desktop notifications are on
Bell with an amber dot	Not turned on yet — click it to turn them on
Bell with a line through it	Blocked, or not available on this browser/address

Click the bell to open **Desktop notifications**, which shows your status and what to do next. Under **Troubleshooting** at the bottom there are always three step-by-step guides you can open — *Allow notifications for this page*, *Check your browser's settings*, and *Check your computer's settings* — whatever your status:

- **Not turned on yet** → one button to turn them on. If your browser doesn't ask (browsers stop asking after the request has been closed a few times), MakeShift tells you and shows how to allow notifications for the page yourself. The same steps are under **Button not working? Allow it in your browser**.
- **On** → a **Send test notification** button. Use it to check your computer actually shows them.
- **Blocked by your browser** → short steps to allow it again. Browsers won't let a site ask twice, so you allow it yourself: click the bell icon in the address bar if there is one, or the icon at the left of the web address, and set **Notifications** to **Allow**.
- **Check your browser's settings** → your browser has its own switch that stops *every* website from asking to send notifications. If it's on, MakeShift can't ask either. These steps show how to open your browser's Settings (on a Mac press **⌘ + ,**; on Windows use the menu at the top right), search for **notifications**, and make sure websites are allowed to ask.

- **Check your computer's settings** → tips for **Mac and for Windows** (the one for your computer is listed first). Even when the browser allows notifications, your computer can hide them — for example, notifications turned off for your browser, or **Focus / Do Not Disturb** switched on. **If you sent a test notification and didn't see it, this is almost always why.**

The red dot on the tab and the pop-ups inside MakeShift work either way — only the desktop notification depends on these settings.

When the red dot clears: as soon as you open the **Bookings** page. "New" means *arrived since you last opened Bookings* — this is remembered on your account, so opening Bookings on your phone clears it on your laptop too. An inquiry that someone moves to Pending or Canceled also stops counting, even if nobody opened Bookings.

Good to know:

- It checks for new inquiries every **30 seconds** while MakeShift is open. If the tab has been in the background a while, your browser may slow this down, so a notification can take up to about a minute to appear.
- Notifications only appear while MakeShift is **open in a browser tab** — close the tab and they stop.
- **Leaving MakeShift open doesn't keep you signed in.** The background checks don't count as activity, so if you don't click anything for 2 hours you're signed out as usual — and notifications stop until you sign back in.
- It's per person: each staff member has their own red dot, based on when *they* last opened Bookings.
- Desktop notifications need the site to be on a secure (**https://**) address.

8. Logs Module

Audit Logs

The audit log tracks every create, update, and delete action made within the admin panel.

- **Who** did it, **what** they changed, and **when**.
- Useful for accountability and troubleshooting.
- Can be filtered by action type, model (e.g., Booking, Room, User), admin user, and date range.

Mail Logs

A record of every email sent by MakeShift (both automated and manually triggered).

- Shows the recipient, subject, and date sent.
- Useful for confirming that emails were sent to customers.
- Can be filtered by date range and subject keyword.

9. People Module

Users

The Users page manages **admin accounts** — the people who have access to the admin panel.

- Create new admin accounts by providing a name, email, and password.
- Edit an existing user's name, email, or password.
- View each user's **last login time**.
- Delete users who no longer need access.

Customers do **not** have accounts — they interact only through the public website without logging in.

10. Tools Module

Database Backups

MakeShift can automatically back up your database on a schedule and let you download those backups.

- Go to **Tools → Database** to see a list of all available backups.
 - Click **Download** on any backup to save a copy to your computer.
 - Click **Generate Backup** to create a new backup immediately.
 - Backup frequency and how many backups to keep are configured in **Settings → Database**.
-

11. Settings

Settings let you customize the look, content, and behavior of MakeShift without touching any code.

Profile & Password

Update your own admin name, email address, or password.

Appearance (Admin UI)

Change the theme of the admin panel interface.

Portal Appearance (Website Branding)

Configure your public-facing website:

- Upload your **logo** (PNG, max 2MB) and **favicon** (max 512KB)
- Set your site's short description (max 30 characters — shown in browser tabs and previews)
- Contact details: email, phone number, office address
- Google Maps embed link for the map shown on the Contact Us and Home pages

Announcements

Manage the promotional banner shown at the very top of the home page, above the Featured Space section.

- Go to **Settings → Portal Appearance → Announcements**.
- Upload up to 10 images (5MB each). Recommended aspect ratio: **16:9** (wide).
- One image = static banner. Two or more = auto-rotating slider.
- Optional **mobile image** per slide (recommended aspect ratio **1:1**, square) — shown to phone visitors instead of the wide banner. No mobile image = phones show the wide banner too.
- Optional **link** per slide — opens on click, shown for both desktop and mobile versions.
- Reorder with the arrow buttons, remove with the X (mobile image has its own X).
- Click **Save Announcements** to publish.

Website Content (Homepage)

Edit what appears on the public homepage:

- **Featured Space** — select which room to highlight prominently
- **Who We Are** section — your company introduction text
- **YouTube Video** — embed a video tour or promo video
- **Map Section** — label and link for the location map

- **Room Slider** — choose which rooms appear in the homepage spaces carousel

Legal Documents

Edit your **Terms of Service**, **Privacy Policy**, and **House Rules** using a rich text editor. These are shown to customers when they submit a booking inquiry and must be agreed to before proceeding.

Email Templates

Customize what the automated emails say to customers. Each of the four customer emails has editable sections:

Email	Editable Sections
Inquiry Received	"What Happens Next" message
Payment Required (Acknowledged)	Payment steps, screenshot requirement text, deadline warning
Booking Confirmed	Arrival instructions, additional information
Booking Canceled	Cancellation explanation, what it means, next steps, alternative options
Booking Rescheduled	Reuses the Booking Confirmed "Arrival instructions" section (no separate settings)

When a booking has a discount, a voucher, or a manual adjustment, the Inquiry Received, Payment Required, Booking Confirmed, and Booking Rescheduled emails automatically show a **Subtotal** line above the total, then **one line per item** — an automatic promo is labelled *Discount*, a customer-claimed voucher is labelled *Voucher*, and a staff adjustment is labelled *Adjustment* with its reason and a + or – sign. Every line is shown separately so the customer can see exactly how the total was reached. Nothing needs to be configured — the lines simply do not appear when there is nothing to show.

You can also update:

- **Bank account details** shown in payment emails
- **Support link** (shown as a button in all emails)
- **Footer text** (two lines shown at the bottom of all emails)

Mailing Configuration

Configure system-level email delivery settings.

- **BCC** — Enter one or more email addresses (comma-separated) to be silently copied on every outgoing email sent by MakeShift. Useful for keeping an internal record of all customer communications.
 - Example: `admin@yourbusiness.com, records@yourbusiness.com`
 - Leave blank to disable BCC.

Database Settings

Configure how often automatic backups run and how many backups to keep on file.

12. Public Website

The public website is what your customers see. No login required.

Home Page (/)

- **Hero/Banner** — main header image
- **Announcements** — full-width promotional banner at the top of the page content, above Featured Space. Shows nothing if no images are set, a static image if one is uploaded, or an auto-rotating slider if multiple are uploaded. Managed in Settings → Portal Appearance → Announcements.
- **Featured Space** — highlighted room with photo, description, and a link to view it
- **Who We Are** — your business introduction
- **Video Tour** — embedded YouTube video (if configured)
- **Spaces Slider** — horizontal scroll of selected available rooms
- **Location Map** — embedded Google Map

Spaces Page (/spaces)

- Lists all active rooms.
- Customers can filter by a specific date to see only rooms that are open and have availability on that day.
- Each room card shows the name, a photo, price per hour, capacity, and a link to view details.
- If a room has an active discount for that date, a green promo badge (e.g., "10% OFF") appears on its photo.
- With no date filter applied, a promo starting later shows as "10% OFF / from Aug 1".

Space Detail Page (/spaces/{room-name})

- Full details: description, size, capacity, price per hour
- If a discount applies, the original price shows crossed out beside the new discounted rate, with a green badge naming the promo. The estimated total in the booking dialog uses the discounted rate.
- Inside the **Inquire Now** dialog, the promo appears above the Total Price: a green "10% OFF" pill, the promo name, the crossed-out hourly rate beside the discounted one, and the crossed-out original total beside the discounted total once times are chosen.
- If the promo hasn't started yet, the dialog shows the pill with "pick a date from Aug 1 to get this" and leaves prices uncrossed until a qualifying date is selected.
- The **Date** field in the Inquire Now dialog is a fare-style calendar: each open day shows its rate underneath the date number, discounted days shown in green. Days the room is closed on (by schedule or a schedule override) are greyed out and can't be picked. Picking a date still checks specific time-slot availability the same way it always has — the calendar itself just helps customers browse and compare prices before choosing.
- Photo gallery
- Amenities list
- Available layout options
- Available time slots for a selected date
- **"Book This Space"** or **"Inquire"** button to start the booking process

Reservation / Inquiry Form

- Customer selects their preferred date, start time, end time, and layout.
- Customer enters their name, email, and any special notes.
- Customer can optionally enter **"Referred By"** (who referred them) and select **"How did you hear about us?"** from the Sources list managed in the admin panel.
- The booking summary shows the computation, a **Discount / Promo** line naming the promo and the amount taken off, and the discounted Total Price.

- Customer reviews and agrees to the legal documents (Terms of Service, House Rules, Privacy Policy).
- Customer can optionally tick "**Subscribe to our newsletter**" to opt in to marketing emails.
- On submission, MakeShift creates an Inquiry booking and sends a confirmation email to the customer.

Contact Us Page (/contact-us)

- Business contact details (email, phone, address)
 - Google Map
 - **Vouchers in the Inquire Now pop-up and on the inquiry form** — when a room has vouchers running, they appear as cards in both places, and a voucher claimed in the pop-up carries over to the form. Ones the customer qualifies for can be tapped to apply; the rest are greyed out showing what's needed to unlock them.
 - **Resend My Bookings** — customers can enter their email address to receive all their confirmed booking vouchers resent to their inbox.
-

13. Demo Script & Suggested Sequence

Use this sequence to walk a customer through MakeShift from end to end. Each section includes what to show and talking points.

Part 1 — The Public Experience (Customer's Perspective)

Start here to show what a customer sees before they ever contact you.

Step 1: Home Page

- Open the public website home page.
- Point out the Announcements banner at the top (if configured) — mention it can slide through multiple promotional images, each optionally clickable.
- Point out the featured space, who we are section, and the spaces slider.
- Highlight that the site is branded with the business logo, colors, and contact info — all configurable.

Step 2: Browse Spaces

- Navigate to the Spaces page.
- Select today's date or a future date to filter available spaces.
- Show how unavailable rooms (closed by schedule or override) are automatically hidden.
- Click into a room to show the detail page.

Step 3: Space Detail

- Walk through the room's gallery, amenities, layouts, and pricing.
- If a discount is set up for this room (see Step 14b), point out the crossed-out original price and the green promo badge.
- Open the Inquire Now dialog and click the Date field — point out the rate shown under each day, and how discounted days stand out in green. Explain: "*Customers can compare prices across the month before picking a date, like a flight booking site.*"
- Select a date and watch the available time slots populate.
- Point out that the system is checking availability in real time (existing bookings are accounted for).

Step 4: Submit an Inquiry

- Click the booking/inquiry button.
- Fill in sample customer details (name, email, note).
- Optionally fill in **Referred By** and pick a **"How did you hear about us?"** option — mention this data helps track which marketing channels are working.
- Point out the **Discount / Promo** line in the booking summary and the discounted Total Price.
- Show the legal document agreement step (Terms, Privacy Policy, House Rules — all editable by the admin).
- Submit the form.
- Show the success page the customer sees.
- Mention: *"The customer receives an email immediately confirming we got their inquiry."*

Part 2 — Admin Panel (Staff Perspective)

Now switch to the admin view. Log in at `/auth-access`.

Step 5: Dashboard

- Show the dashboard overview: today's bookings, recent activity.
- Point out the **Booking Verification** widget.
- Explain: *"Front desk staff use this when a customer arrives — they scan or type the voucher code and instantly see if the booking is valid."*

Step 6: Finding the New Inquiry

- Navigate to **Transactions → Bookings**.
- Find the inquiry submitted in Step 4 (status: Inquiry).
- Open the booking detail page.
- Show all the booking info: room, date, time, layout, customer name and email, notes, referred by / source, subtotal, discount, and total price.
- Explain: *"The discount is saved onto the booking. Even if we change or delete the promo later, this booking keeps the price the customer was quoted."*

Step 7: Moving to Pending (Reserving the Slot)

- From the booking detail, open **Status → Pending**. A dialog appears.
- Set the **Payment Deadline (Expires At)** — the date the customer must pay by (optional; the email shows "N/A" if blank).
- Click **Set as Pending & Notify**.
- Explain: *"One click reserves the slot and sends the customer an email with payment instructions, your bank details, and their payment deadline. If they don't pay in time, the system automatically cancels it."*
- Mention the plain **Set as Pending** option for when staff want to reserve first and email later (the **Notify** button on a Pending booking resends the same email).

Step 8: Recording a Payment

- Navigate to **Transactions → Payments** (or use the payment section on the booking detail).
- Create a new payment: select the booking, choose a payment provider (e.g., GCash), enter a reference number, amount, and date paid. Optionally attach a screenshot.
- Point out that picking the booking shows its subtotal, discount, total, and remaining balance — and pre-fills the Amount with the balance, so staff always collect the discounted figure.
- Return to the booking and show that the total paid is now updated.

Step 9: Confirming the Booking

- With payment received, change the booking status to **Confirmed**.
- Show what happens automatically:
 - A unique voucher code is generated (format: XXXX-XXXX-XXXX-XXXX).
 - A QR code image is created from that code.
 - A confirmation email is sent to the customer with the voucher code and QR code.
- Mention: *"The customer uses this QR code to check in when they arrive."*

Step 9b: Rescheduling a Confirmed Booking (optional)

- Still on the confirmed booking, click **Reschedule**.
- Pick a date a few days out — point out that only start times where the full duration fits appear, and the end time fills itself in.
- Point out the two price boxes: *"The customer already paid, so their rate is locked — but you can see what the new date would normally cost."*
- Add a short note and confirm. Show the new line appended under Notes and mention the customer receives a "Booking Rescheduled" email with the same voucher.

Step 10: Check-In Simulation

- Return to the Dashboard.
- Enter the voucher code from the confirmed booking into the Booking Verification tool.
- Show the booking details that appear — this is exactly what front desk staff see on the day.

Part 3 — Setting Up Spaces

Show how to add and configure a room.

Step 11: Create an Amenity and Layout (if not already set up)

- Go to **Spaces → Amenities** → create a sample amenity (e.g., "Projector").
- Go to **Spaces → Layouts** → create a sample layout (e.g., "Boardroom").
- Go to **Transactions → Sources** → create a sample source (e.g., "Instagram") so it's ready for the inquiry form demo in Step 4.

Step 12: Create a Schedule

- Go to **Availability → Schedules** → create a new schedule.
- Set weekday hours (e.g., Mon–Fri 8am–6pm, Sat 9am–3pm, Sun closed).
- Set Max Days to 30.
- Explain: *"This is the template that controls when this room is open for booking."*

Step 13: Create a Room

- Go to **Spaces → Rooms** → create a new room.
- Fill in: name, description, price per hour, quantity, capacity.
- Assign the schedule created in Step 12.
- Assign the amenity and layout from Step 11.
- Upload a sample image.
- Toggle **Active** ON.
- Explain: *"As soon as this is saved, the room appears on the public website and accepts bookings based on the schedule we assigned."*

Step 14: Schedule Override

- Go to **Availability → Overrides** → create a new override.

- Select tomorrow's date, set it to Closed, and assign it to the room just created.
- Go back to the public website, navigate to that room, and select tomorrow's date.
- Show that no time slots are available — the override worked.
- Explain: *"This is how you handle holidays, maintenance, or sudden closures without changing your regular schedule."*

Step 14b: Create a Discount

- Go to **Spaces → Discounts** → create a new discount.
- Name it (e.g., "Summer Promo"), pick **Percentage**, and enter 10.
- Assign it to the room created in Step 13, set the **Reservation dates** to cover the next month, and set the **Booking period** from today to the end of next month.
- Toggle **Active** ON and save.
- Go back to the public website and open that room — show the crossed-out original price, the new rate, and the promo badge.
- Explain: *"No promo code needed. Any booking for this room inside these dates gets the discount automatically — on the website, in the customer's email, and in the amount they owe."*
- Mention priority: *"If two promos cover the same room, the one with the lower priority number wins — so you can schedule promos back to back without them fighting."*

Step 14c: Create a Voucher

- Go to **Spaces → Vouchers** → create a new voucher.
- Name it (e.g., "Long Stay Reward"), pick **Percentage**, enter 10, and set **Minimum Hours** to 6.
- Assign it to the same room, set both date ranges as in Step 14b, toggle **Active** ON and save.
- Go to the public website and open that room, then click **Inquire Now**. With a **4-hour** slot picked, show the voucher greyed out with "Book 6+ hours to unlock — 2 more hours".
- Extend the slot to **6 hours** without closing the pop-up — the card unlocks as you do. Click it and show the total drop right there.
- Continue to the full inquiry form and point out that the voucher came along and is still shown in the price breakdown.
- Explain: *"The promo was applied automatically; this one the customer earns and claims. They stack — both come off the original rate — so a long booking gets both."*

Part 4 — Configuration & Settings

Show the customization options.

Step 15: Website Settings

- Go to **Settings → Portal Appearance** — show where to upload a logo and favicon, set contact info, and manage the Announcements banner.
- Go to **Settings → Website Content** — show the homepage configuration options.
- Go to **Settings → Legal Documents** — show where Terms, Privacy Policy, and House Rules are edited.

Step 16: Email Templates

- Go to **Settings → Email Templates**.
- Show that all the text in the four customer emails can be customized.
- Mention bank account details and support link fields.
- Explain: *"You don't need a developer to update what the emails say — everything is editable here."*

Step 17: Database Backups

- Go to **Tools → Database**.
- Show the list of existing backups.
- Trigger a manual backup and show it appearing in the list.
- Go to **Settings → Database** and show the frequency and retention settings.

Part 5 — Monitoring & Accountability

Step 18: Audit Logs

- Go to **Logs → Audit Logs**.
- Filter by today and show the actions taken during this demo (bookings created, status changes, etc.).
- Explain: *"Every action in the system is logged — who did it and when."*

Step 19: Mail Logs

- Go to **Logs → Mail Logs**.
- Show the emails sent to the demo customer during this walkthrough.
- Explain: *"You can always verify here whether an email was actually sent to a customer."*

Summary of Key Selling Points

Feature	Value
Hidden admin login	Security — not exposed to the public
Real-time availability	Customers only see genuinely available slots
Automated emails	No manual sending required for inquiry, payment request, and confirmation steps
QR code check-in	Fast, reliable on-site verification
Schedule + Override system	Flexible — handles regular hours and exceptions separately
Configurable email content	No developer needed to update messaging
Audit trail	Full accountability for all admin actions
Auto database backup	Data protection with minimal effort
Payment tracking	Multiple partial payments supported with proof of payment attachments
Automatic discounts	Run room promos with no promo code; already-submitted bookings keep the price they were quoted
